October 4, 2011

Winter Springs Residents Can Use QR Codes to Pay Utility Bills!

Chances are you've seen QR Codes. They're in magazines and advertisements, on websites, TV, invoices, business cards, and billboards. These square-shaped bar codes seem to be popping up everywhere.

Utility customers in the City of Winter Springs now have a quick and convenient way to pay their water utility bills using QR Codes. Using the camera on their mobile device, utility customers can scan the QR code on their utility bill. Embedded within the QR Code is the customer's bill number, amount owed on their current bill and a link to a secure payment screen where they can easily complete payment using a credit or debit card or electronic check.

By utilizing QR Codes on the City's utility bills, utility customers can now conduct business with the City at their leisure and in the comfort of their own environment. No longer is a utility customer required to come to City Hall and make a payment or mail in a check.

A QR code looks like this:

For more information on how the City of Winter Springs is using this technology, contact our Information Services Department at 407-327-8981.
